Note:

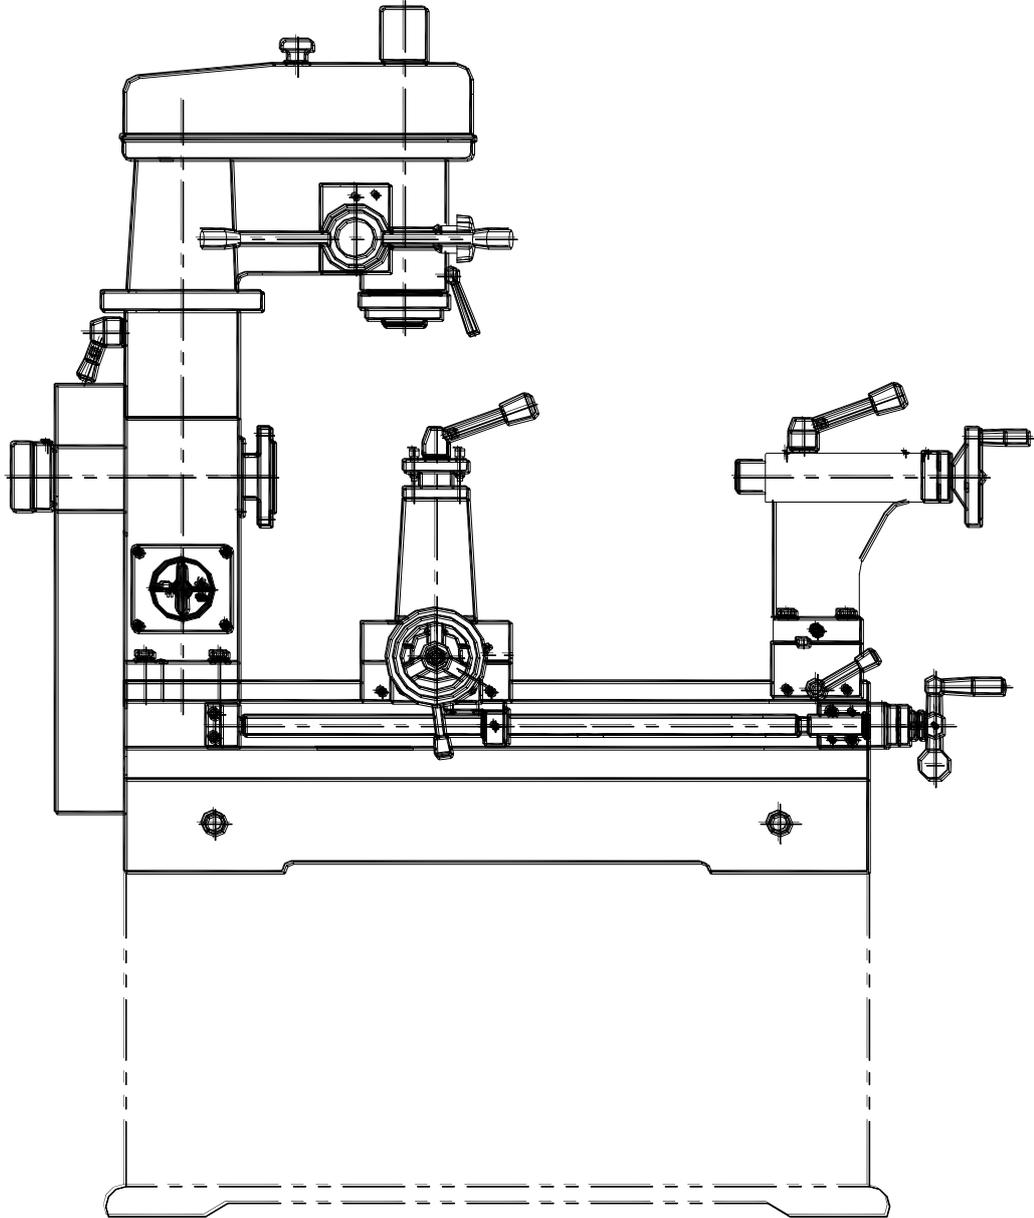

This booklet is for the model 400 and 400/1 machines. The 400/1 machine is the same as 400 machine except the drilling—milling unit. The unit of 400/1 may be not only swivelled 360°, but also raised 80mm. The working scope of 400/1 is expanded.

MODEL 400/1 MULTI—PURPOSE
MACHINE INSTRUCTION OF
UP—AND—DOWN MOVEMENT
OF DRILLING—MILLING HEAD

Unlocking screw 1,rotate disk 2,the drilling—milling head may be arised or get down. When it is in wanted place ,the screw 1 must be locked firstly ,then you may perform the processing of drilling or milling.

1、 OUTSIDE DRAWING (400)

2. TECHNICAL SPECIFICATIONS

TURNING

Centre—height.....	210mm
Max. turning diameter(for steel or iron)	40mm
Max. distance between centers.....	400mm
Max. longitudinal travel.....	380mm
Max. cross travel.....	120mm
Taper of hole in spindle.....	Morse No.3
Taper of hole in tailstock barrel.....	Morse No.3
Spindle bore.....	20mm
Spindle speed.....	500,900,1600r.p.m.

DRILLING AND MILLING

Max. drilling diameter.....	15mm
Max. milling diameter.....	12mm
Max. vertical milling cutter diameter.....	20mm
Max. vertical milling face diameter.....	63mm
Max. spindle stroke.....	85mm
Taper of hole in spindle.....	Morse No.3
Spindle speed.....	375,500,675,900,1180,1600r.p.m.

Area of table (L×W)200×150mm²

OTHERS

Electric motor.....	550W,220V/50Hz
Overall dimensions(L×W×H), mm.....	970×580×890
Net weight	155Kg

3. APPLICATION

Model HQ400 Multi—Purpose Machine is capable of doing turning, drilling, and milling, and suitable for processing metal, wood, and other materials.

It is being extensively used in jobbing shops, schools teaching laboratories testing, occupation training, particularly in family for processing ideal motor car parts, household utensils, and artwares.

4. CONSTRUCTION AND FEATURES

The machine consists of the bed, the headstock, the drilling—milling head, the table, the tailstock, the rotation base, the electric motor, ect. and concentrates the functions of turning, drilling and milling. The drilling—milling head can rote 360^0 on the rotation base, It has advantages of compact construction, excellent properties, easy operation, multiple purposes.

5. DRIVE SYSTEM(Fig.1)

SPINDLE DRIVE

Rotation of the spindle(7) is provided by the movement of the claw clutch(3), the claw clutch being driven from the motor by means of the V—belt(2) and the cone pulleys (1)(4). Changing the position of the V-belt on the cone pulleys, three different speeds of 500, 900, 16000r.p.m. can be obtained for the spindle.

DRILLING—MILLING SPINDLE DRIVE

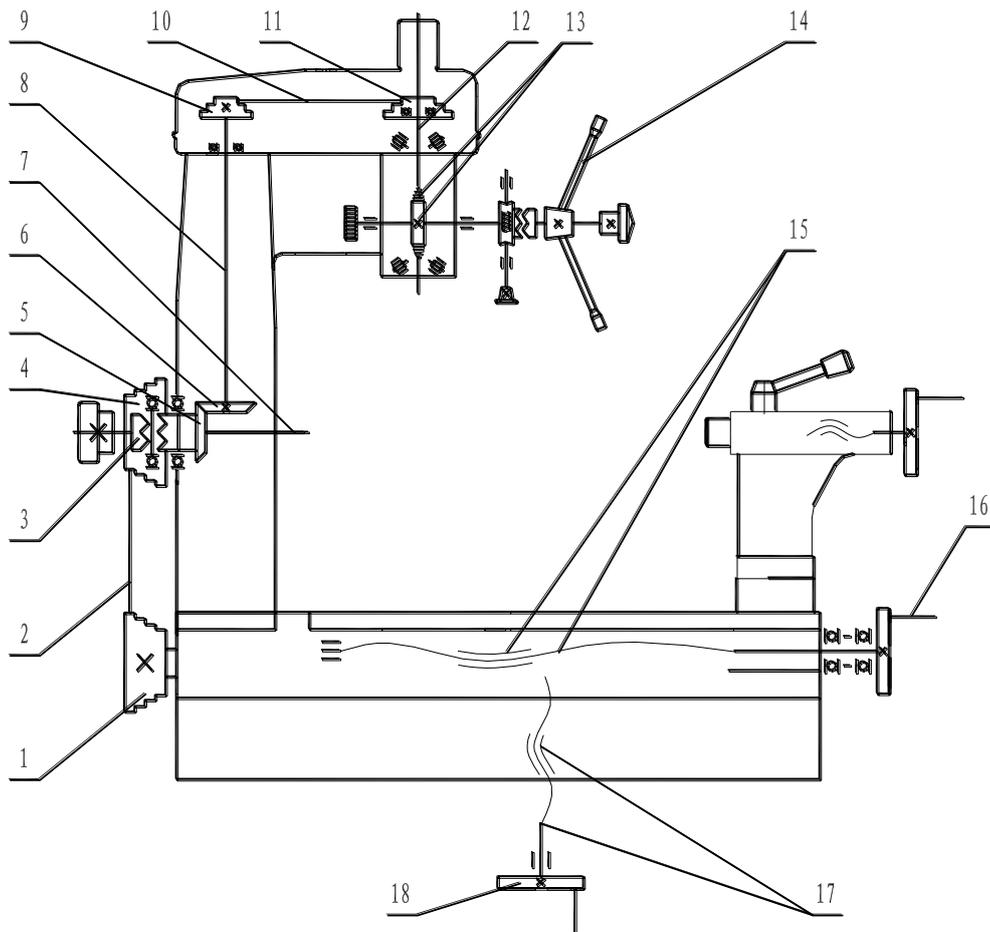

While the motor drives the driving shaft(8) by the v—belt, the cone pulleys, and the double bevel gears(5)(6), rotation of the drilling—milling spindle (12) is brought about by the V—belt(10) and the cone pulleys(11) (9) mounted on the drilling—milling spindle and the driving shaft.

The position of the V—belts(2)(10)on the cone pulleys being changed, the drilling-milling spindle may revolve at a speed of 375,500,675,900,1180, or 1600r.p.m.

FEED—MOTION

Turning the lever for vertical motion (14), the tool moves vertically by the gear—rack mechinism(13). Turning the handwheel for transverse motion(18) or the lever for longitudinal motion(16), the tool moves crosswise or longitudinally by the relevant screw feed mechanism(17 or 15).

Fig.1 Transmission diagram

6. ELECTRICAL SYSTEM(Fig.2)

The machine is driven by a 550W,220V/50Hz, single phase motor. To the special order, we can also supply the motors with 110V/220V/380V/440V,50Hz/60Hz, single/three phase. The motor is controlled by the Hz10 switch. In front of the socket, a fuse must be connected with wire. If the supply power is 110V, the fuse must be 20A, otherwise it must be 10A.

HZ10—combined switch instruction

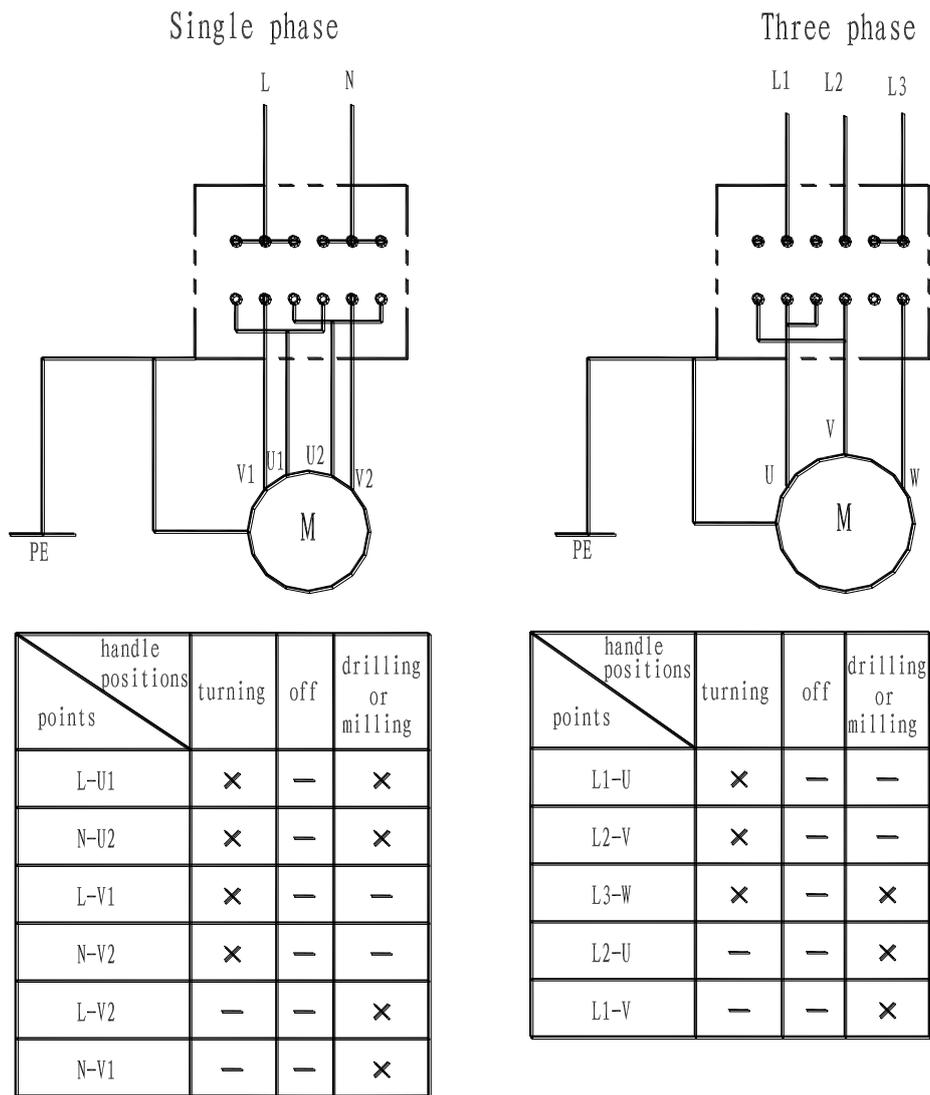

Fig.2 Diagram of electrical system

7. LUBRICATION(Fig.3)

All oil sites on the machine are oiled with engine oil in accordance with the regulations mentioned in figure 3.

The surfaces of the slides, the leadscrew, and the drilling—milling sleeve are oiled with engine oil according to the operating condition of the machine.

All rolling bearings should be greased regularly and washed once a year.

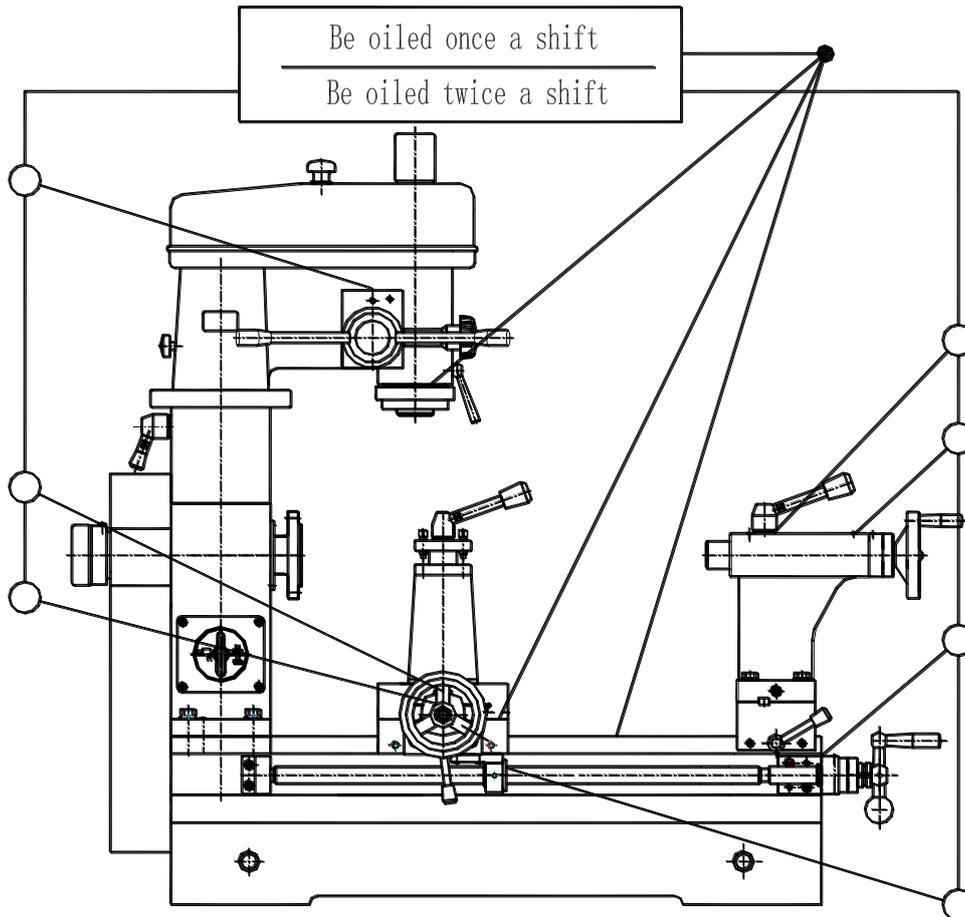

Fig. 3 Diagram of lubrication

8. LIFT AND INSTALLATION

There are four shafts for lifting the machine on the two sides of the bed. Pulling out the shafts and tying up the ones with the lifting ropes. The machine may be lift and carried. (attend to protecting the control level of the machine and the painted surface)

A rigid base is given by the user in dimensions shown in figure 4, the machine is placed on it and then fixed to it with the screw bolts. The surface of the table is levelled, the admissible error is 0.1mm in 1000mm.

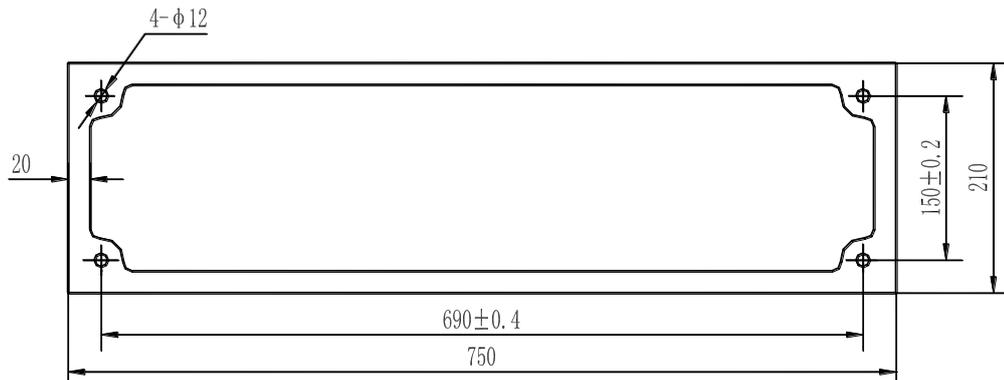

Fig.4 Plan of base

9. OPERATION(Fig.5)

Before the machine is put into service, the operator must read the operating instruction manual carefully to acquaint himself with the construction of the machine, the functions of the control part, and the demands of lubrication.

The carriage lock lever(14), the tailstock lever(12), the drilling—milling sleeve clamp lever(7), and the rotation—shaft clamp lever(3) must be made loose; the machine is washed with uncorrosive kerosene, and then cleaned with dry cotton goods and oiled.

Pulling out or pushing in the clutch operating handwheel(1), turning the Hz10 combined switch(2), and operating the relative levers, you may perform the processing you need.

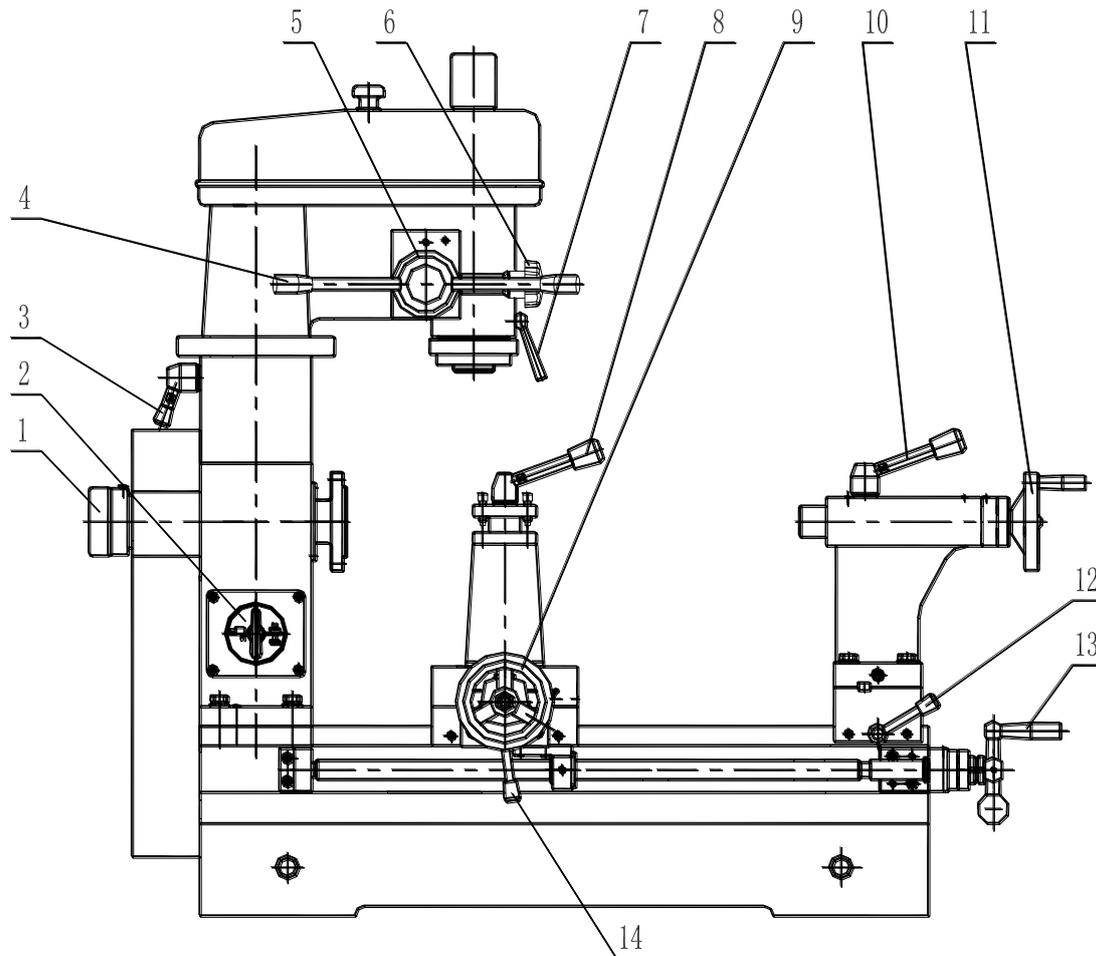

Fig.5 Diagram of control-part positions

- | | |
|---------------------------------------|---|
| 1 Clutch operating handwheel | 8 Tool post lock lever |
| 2 Hz10 combined switch | 9 Handwheel for transverse motion |
| 3 Rotation—shaft clamp lever | 10 Tailstock barrel clamp lever |
| 4 Lever for vertical motion | 11 Tailstock barrel adjusting handwheel |
| 5 Clutch operating handle | 12 Tailstock lock lever |
| 6 Micro-feed handle | 13 Lever for longitudinal motion |
| 7 Drilling-milling sleeve clamp lever | 14 Carriage lock lever |

10. MAINTENANCE

All oil sites must be lubricated before the machine is started

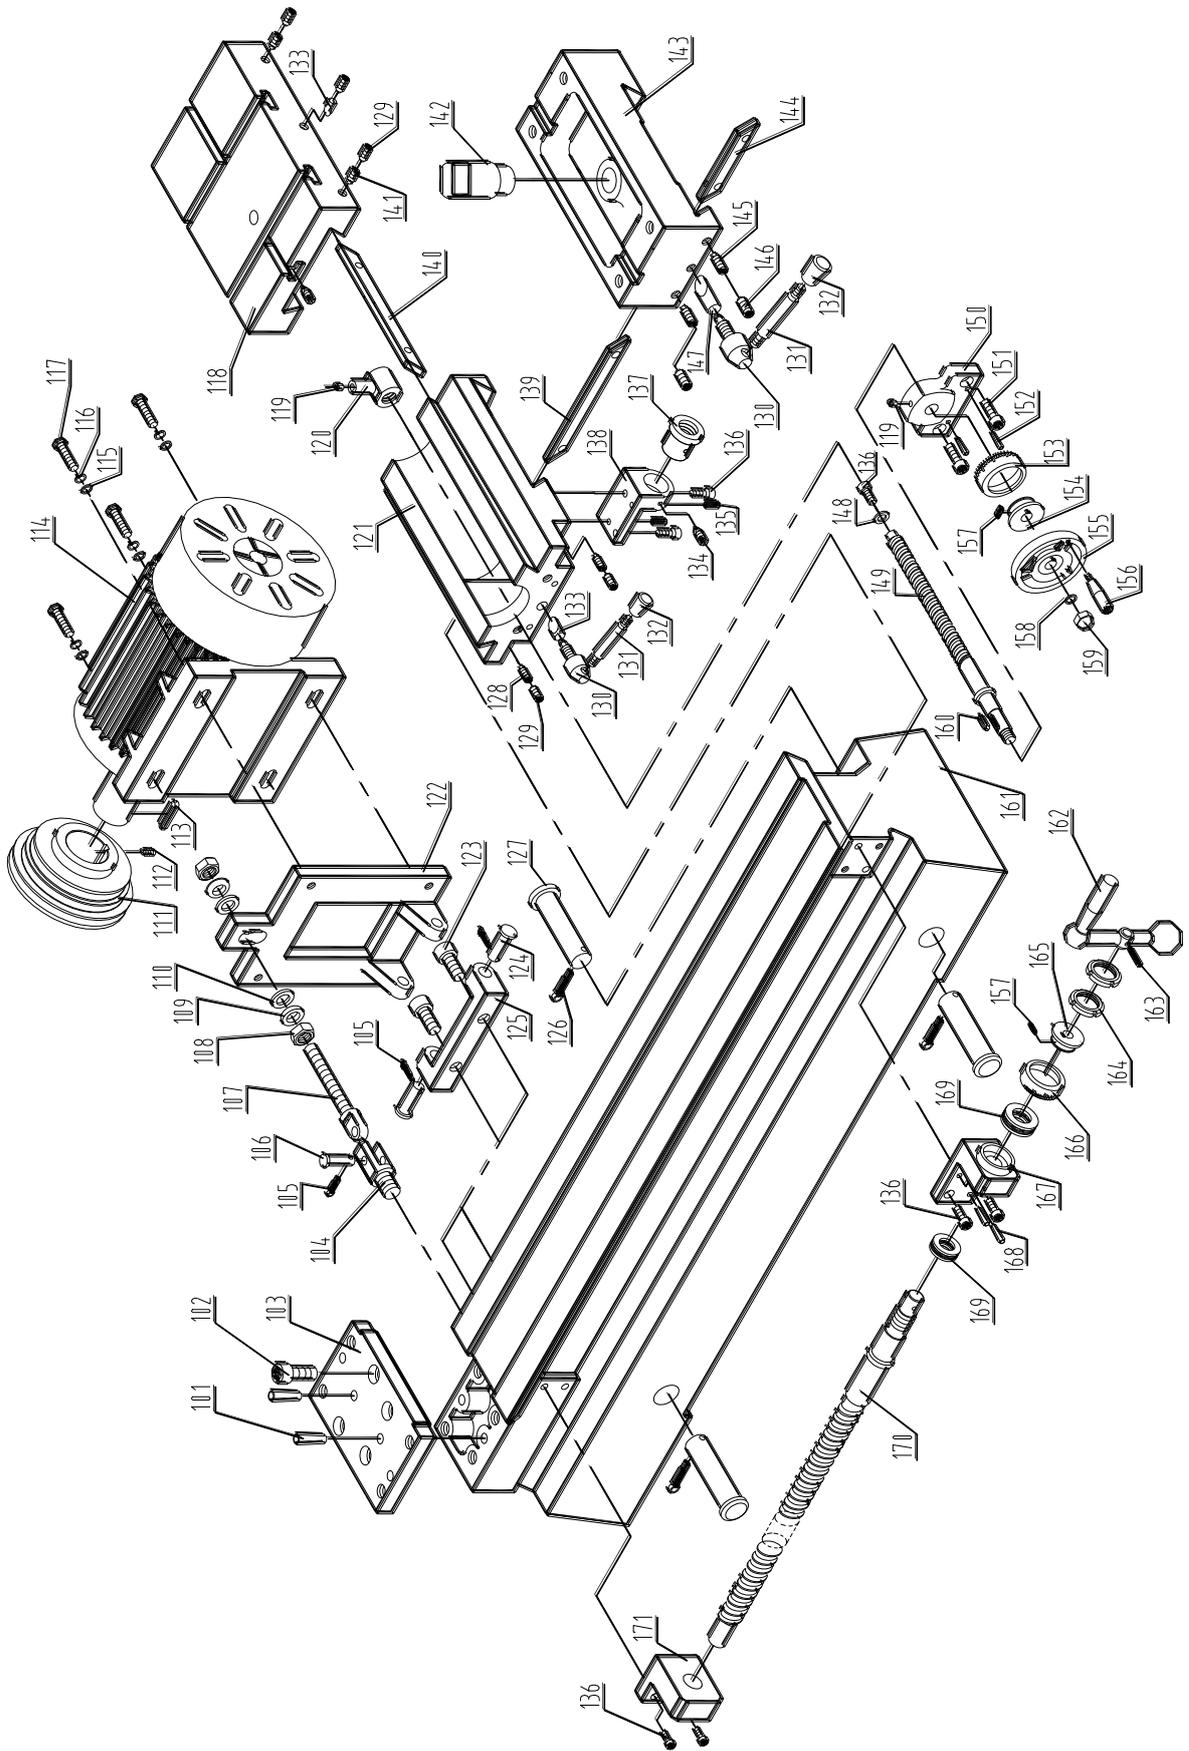

Range of work is not allowed to be in excess of the working ability of the machine.

While the machine is out of order, or sends out abnormal noise in operation. It must be stopped at once, and then checked and repaired.

11. ACCESSORIES

Serial No.	Name	Specification	Quantity	Remarks
1	Three-Jaw Chuck	80mm or 100mm	1	
2	Stationary centers	Morse No.3	2	
3	Drill-Chuck	13mm	1	
4	Drillstock		1	
5	Facing Cutter		1	Supplied according to the contract
6	Tie rod		1	
7	Tie-rod washer		1	
8	V-belts	1000mm	1	
		710mm	1	
9	Tool-Post Wrench		1	
10	Double end Wrench	10~12mm	1	
11	Inner Hexagonal Wrenches	4mm	1	
		6mm	1	
		8mm	1	For 400/1
12	Wedge		1
